CAmatic Piscine

Desktop operations system

A Windows desktop system for swimming pool and facility operations: subscribers, associations, access cards, memberships, payments, time slots, devices and reports.

1. Contexte du projet

The application is an operational tool used by staff who need fast data entry and reliable daily management. It was built in a professional team context around a legacy desktop stack and client-specific workflows.

2. Objectifs

- Subscriber management
- Membership lifecycle
- Card/access control
- Payments and reporting
- Configuration of clubs, devices and time slots

3. Acteurs

- Administrator
- Reception/operations staff
- Accounting user
- Access/device manager

4. Interfaces et fonctions principales

Authentication	Login screen for username and password before staff can access the management modules.
Home/Dashboard	Entry point for daily operations and navigation toward visitors, cards, devices, subscriptions and reports.
Visitors/Subscribers	Create, update, search and inspect visitor/subscriber records.
Cards	Assign cards, mark lost cards, return cards and manage access credentials.
Subscriptions	Renew, pause and recover individual or club subscriptions.
Configuration	Manage clubs, associations, time zones, devices and system parameters.
Reporting/Statistics	Generate operational reports and statistics for follow-up.

5. Technologies utilisees

C#

.NET Framework 4.8

WPF

SQL Server

MVVM

Crystal Reports

6. Travail en equipe / collaboration

Collaboration project: my work is presented as part of a larger professional codebase, with attention to existing modules, client workflow constraints and maintainability.
