

Dark Store API

E-commerce backend

A layered ASP.NET Core backend for products, categories, carts, favorites, inventory, reviews, authentication, vendor/customer roles, uploads and email infrastructure.

1. Contexte du projet

The backend supports a dark-store/e-commerce product. The frontend included for the portfolio is a simple API dashboard used to present the backend modules and test API reachability.

2. Objectifs

- Product catalog
- Inventory workflow
- Cart and favorites
- JWT authentication
- Media upload
- Admin/customer/vendor roles

3. Acteurs

- Administrator
- Customer
- Vendor
- Marketer

4. Interfaces et fonctions principales

Frontend API dashboard	Shows API base URL, backend modules and a check button for local/deployed API connectivity.
Swagger/API interface	Developer-facing documentation for testing endpoints when the backend is running.
Authentication endpoints	Register, login, refresh token and role-protected actions.
Product endpoints	Manage product catalog, images, categories, variants, prices and stock.
Customer endpoints	Cart, favorites, reviews and contact messages.

5. Technologies utilisees

ASP.NET Core 9

Entity Framework Core

SQL Server

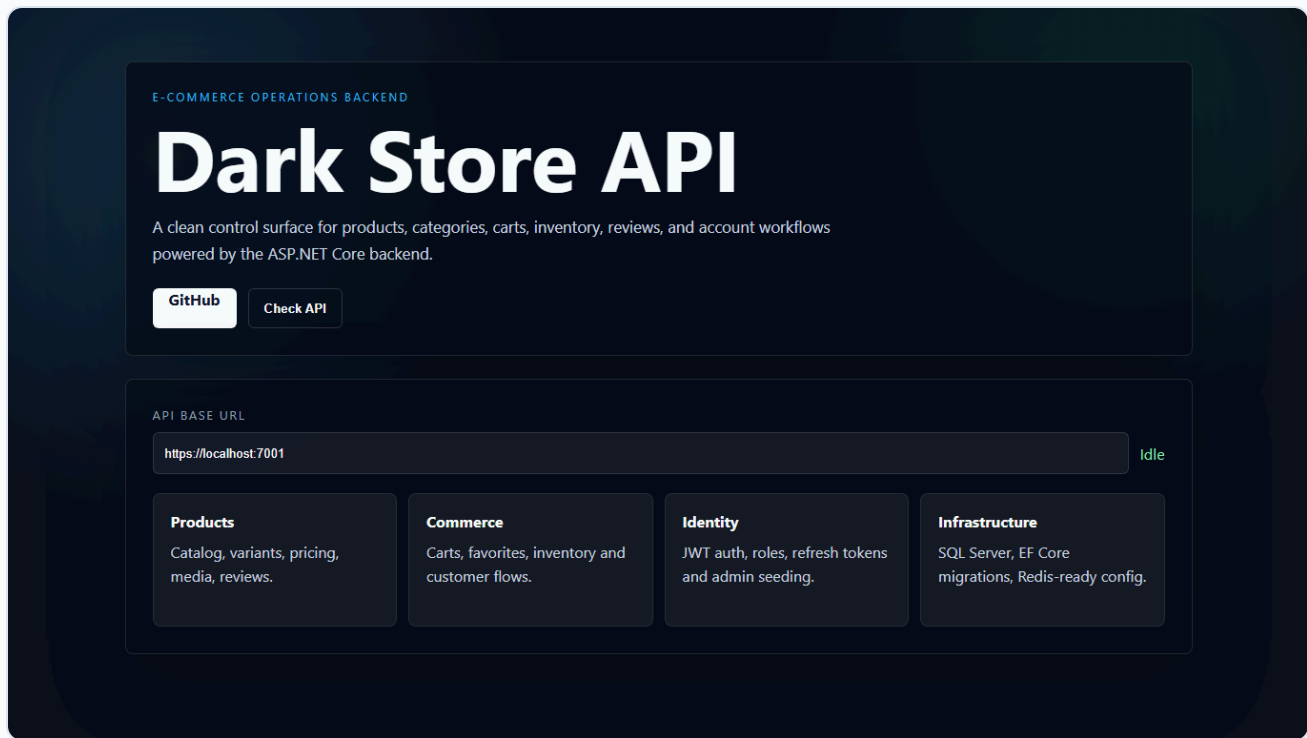

JWT

Redis-ready config

6. Travail en equipe / collaboration

Collaboration project: repository ownership belongs to another team member/organization, so the public portfolio avoids broken private links and focuses on my contribution to backend structure and integration.

7. Capture d'ecran reelle

8. Liens

Repository: Private/team repository access

Demo: Static frontend prepared locally; Vercel deployment requires account login.
