

Dark Store API

E-commerce backend

A layered ASP.NET Core backend for products, categories, carts, favorites, inventory, reviews, authentication, vendor/customer roles, uploads and email infrastructure.

1. Contexte du projet

The backend supports a dark-store/e-commerce product. The frontend included for the portfolio is a simple API dashboard used to present the backend modules and test API reachability.

2. Objectifs

- Product catalog
- Inventory workflow
- Cart and favorites
- JWT authentication
- Media upload
- Admin/customer/vendor roles

3. Acteurs

- Administrator
- Customer
- Vendor
- Marketer

4. Interfaces et fonctions principales

Frontend API dashboard	Shows API base URL, backend modules and a check button for local/deployed API connectivity.
Swagger/API interface	Developer-facing documentation for testing endpoints when the backend is running.
Authentication endpoints	Register, login, refresh token and role-protected actions.
Product endpoints	Manage product catalog, images, categories, variants, prices and stock.
Customer endpoints	Cart, favorites, reviews and contact messages.

5. Technologies utilisees

ASP.NET Core 9

Entity Framework Core

SQL Server

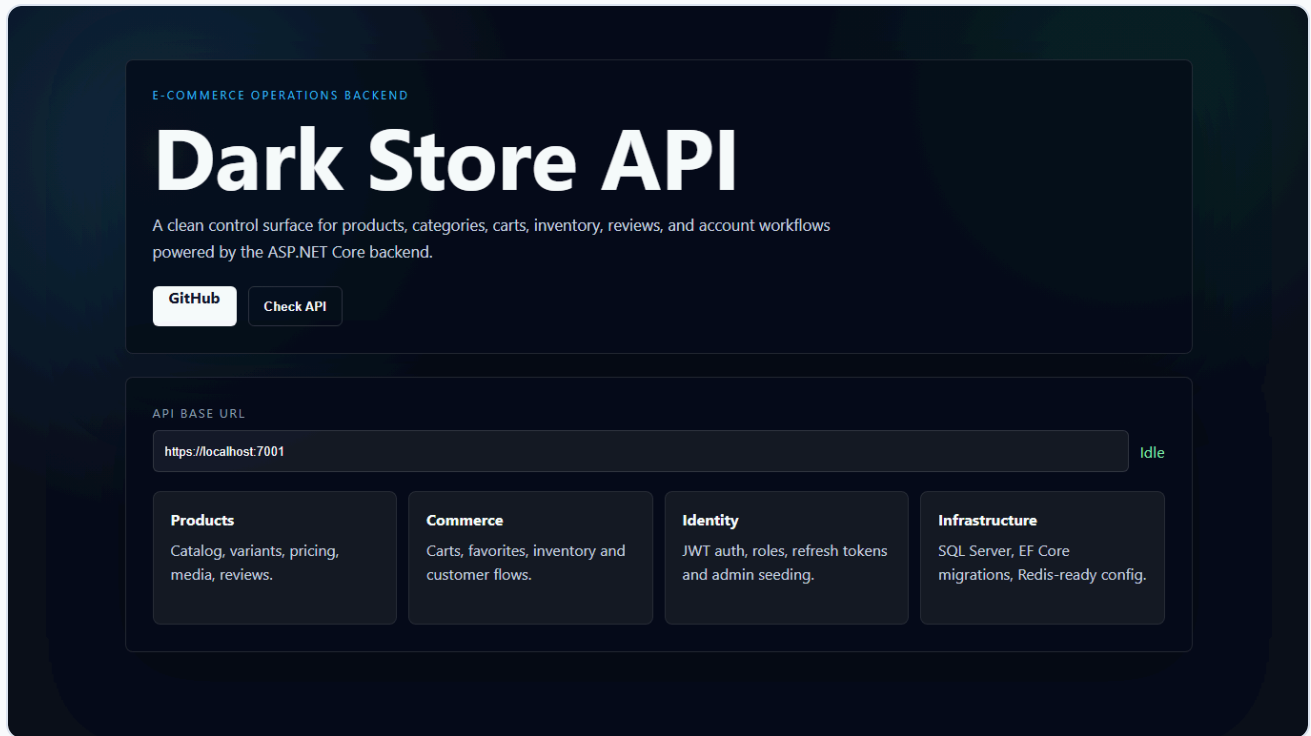

JWT

Redis-ready config

6. Travail en equipe / collaboration

Collaboration project: delivered in a team context with shared backend responsibilities, API integration work and coordination around product, order and identity modules.

7. Captures d'ecran reelles

Desktop API dashboard presenting the backend modules.

E-COMMERCE OPERATIONS BACKEND

Dark Store API

A clean control surface for products, categories, carts, inventory, reviews, and account workflow powered by the ASP.NET Core backend.

API BASE URL

<https://localhost:7001>

Idle

Products

Catalog, variants, pricing, media, reviews.

Commerce

Carts, favorites, inventory and customer flows.

Identity

JWT auth, roles, refresh tokens and admin

Responsive dashboard view used to verify the frontend presentation.

SOURCE-DERIVED INTERFACE INVENTORY

Dark Store API Interface Catalog

Catalog generated from ASP.NET Core controllers. These API interfaces are the backend screens of work for the frontend/client application.

8 interfaces/modules identified from code

INTERFACE	TYPE	MAIN FUNCTION
Auth DarkStore.API\Controllers\AuthController.cs	API controller	POST login POST register POST send-forgot-password POST forget-password
Cart DarkStore.API\Controllers\CartController.cs	API controller	POST add PUT update/{cartItemId} DELETE remove/{cartItemId} DELETE clear/{userId} GET {userId}
Category DarkStore.API\Controllers\CategoryController.cs	API controller	POST create-category GET get-all GET {id} PUT update-category/{id} DELETE delete-category/{id}
Contact DarkStore.API\Controllers>ContactController.cs	API controller	POST / GET get-all
Favorite DarkStore.API\Controllers\FavoriteController.cs	API controller	GET get-favorite-products/{userId}
Inventory DarkStore.API\Controllers\InventoryController.cs	API controller	POST bulk PUT {id} DELETE {id} GET product/{productId} GET {id} GET search/{productId}
Product DarkStore.API\Controllers\ProductController.cs	API controller	POST create-product POST add-product-images/{productId} DELETE delete-product/{productId} GET get-all-products GET get-product-by-id/{productId}
Product Review DarkStore.API\Controllers\ProductReviewController.cs	API controller	POST create GET get-all GET {productId} PUT update/{id} DELETE delete/{id} PUT mark-as-read/{id}

Complete API interface inventory generated from ASP.NET Core controllers.
